Parts of the world we can only imagine

Worldsmiths 2

Hannes Taljaard 2019

The meter of this composition has seven unequal beats in a cycle, and seventeen divisions. The metric type is called Tamrimjidimdikidi.
The performers should not make any tempo inflections that are not indicated in the score.
There should be no pauses, not even short ones, before or after any beats. Avoid, specifically, pauses at the end of accelerandi and ritardandi.
The performers should play perfectly coordinated. Tempos can be somewhat slower than indicated in the score, but if tempos are slower by more than about 5%, some, or many, of the metrical effects will be lost.

The pianist should mostly use the pedal only when indicated. If more pedal is used, keep the sound clean. Some passages use the pedal to let the sounds flow into each other. This is intentional, and in these passages the pedal should not be clean.
Articulation should always be as clear as possible, even crisp. Tones should sound very equal, except when accents are used. Then accents should be clear, but not overdone. The pianist should execute the different kinds of articulation in such a way that the differences can be heard clearly.

The violist should try to avoid small glissandi between notes, specifically in the fast passages. All tones should be produced clearly and equally.
Harmonics are not specified. The performercan simply play harmonics in the way that is technically most feasible, and that will give the best results in sounds.
